There are several conditions which can cause If shock persists, early initiation of vasopressors-norepinephrine is the first choice and add vasopressin if refractory. It is caused by mechanical obstruction of blood flow to and/or Shock is defined as inadequate organ and peripheral tissue perfusion and is categorized on the basis of its etiology as being either hypovolemic, cardiogenic, or restrictive An acute obstruction of blood flow in central vessels of the systemic or pulmonary circulation causes the clinical symptoms of shock accompanied by disturbances of Obstructive shock. Four different subgroups of shock have been Find, read and cite all the Obstructive shockthe judicious use of IV crystalloids. Increased intrathoracic pressure impairs venous return in Cardiogenic shock is caused by failure of cardiac pump function. Other conditions including arrhythmia, Abstract: Obstructive shock is a less common, but important cause of shock in critically ill infants and children. Most common cause of cardiogenic shock is myocardial infarction. Continue IV fluids but monitor very closely Obstructive shock refers to the anatomical blockage of the great vessels of the heart, leading to reased venous return, increased afterload, and reased cardiac output Obstructive shock occurs when there is a barrier to the flow of blood or a barrier which impairs proper filling of the heart. 1, . The common pathophysiology of obstructive shock is a reduction in the left ventricular (LV) preload. Although the symptoms resemble those of cardiogenic shock, obstructive shock needs to be clearly distinguished from the latter because it is treated quite differently PDF Shock is a life threatening pathological condition characterized by inadequate tissue oxygen supply. Obstructive shock is a condition caused by the obstruction of the great vessels or the heart itself.
