PedsQL is a item measurement tool designed to measure health-related quality of life for pediatric patients, via a self-report and a parent proxy report. A point response scale is used across the child self-report (for age 8+) and parent proxy-report (0 = never a problem; 1 = almost never a problem; 2 = sometimes a problem; 3 = often a problem; 4 = always a problem). The PedsQL (Pediatric Quality of Life Inventory™) Measurement Model, developed by Dr. James W. Varni and associates, is a modular approach to measuring health-related quality of life (HRQOL) in healthy children and adolescents and those with acute and chronic health conditions. KINDL-R, Pediatric Quality of Life Inventory (PedsQL) Generic Core Scales, and Quality of My Life Questionnaire (QoML) are also included. STEPHANIE E. HULLMANN, JAMIE L. RYAN, RACHELLE R. RAMSEY, JOHN M. CHANEY, AND LARRY L. MULLINS CHILD HEALTH QUESTIONNAIRE (CHQ) Description Purpose. The survey instrument, guidelines for administering it, and scoring are available. The PedsQL Generic The PedsQL™ Measurement Model is a modular approach to measuring health-related quality of life in both healthy children and adolescents and in those with acute and chronic health conditions. The PedsQL Measurement Model integrates seamlessly both generic core scales and disease-specific modules into one measurement system. The survey integrates generic core scales and disease-specific modules. To measure health-related quality of life (HRQOL) in children and adolescents and those with acute and chronic health conditions. The PedsQL Measurement Model is a modular approach to measuring health-related quality of life (HRQOL) in healthy children and adolescents and those with acute and chronic health conditions. Pediatric Quality of Life Inventory™ (PedsQL™) SCALING AND SCORING OF THE Pediatric Quality of Life Inventory™ PedsQL™ Mapi Research Trust true de la The PedsQL (Pediatric Quality of Life Inventory™) Measurement Model, developed by Dr. James W. Varni and associates, is a modular approach to measuring health-related quality of life of patients with juvenile dermatomyositis: results from the Paediatric Rheumatology International Trials Organisation multinational The PedsQL™ Measurement Model is a modular approach to measuring health-related quality of life in both healthy children and adolescents and in those with acute and chronic health conditions. The Paediatric Quality of Life Inventory (PedsQL™) is a widely used tool/questionnaire for measuring health-related quality of life in children and adolescents but it is Key Descriptions.
