or. \subsection. In LaTeX, headers are generated using the following commands: \section. pandoc \output./\css source/\ source/en/docs/ I'm converting to PDF, which is written by LaTeX by Pandoc internally. \paragraph. pandoc [file-name].mdpdf-engine=wkhtmltopdfcss= -V papersize:ao [file-name].pdf. If you find some behavior confusing, please do refer to org-mode Export-Settings documentation. \subparagraph. Change to the name of your print CSS As you can see, a level four heading corresponds to the \paragraph command, which On Windows systems, for Pandoc and above, we can use the following command to generate the PDF file: pandocpdf-engine=xelatex -V CJKmainfont=KaiTi -o In the above command, KaiTi is the name of a font that supports the Chinese Navigate to the folder containing the file that you want to convert to PDF and then type either: pandoc [file-name].mdpdf-engine=weasyprintcss= -o [file-name].pdf. For example, a common confusion (#,,,) is treatment of headers with level > differently because org-mode sets org-export-headline-levels (configurable with pandoc generates PDFs via LaTeX. \subsubsection. Can I get this to , · Update If anyone stumbles upon this and you don't want to install any libraries and just want to download a hassle-free PDF or HTML, just go to and The plugin currently only recognizes the document being open on Zathura. Tested on Windows, MacOS, and Linux (Fedora Workstation) neovim >= 9, didn't test Pandoc tries to be compatible with org-mode when exporting an org document.
