Flying Saucer is an open-source Java library that provides an easy way to convert XHTML/XML documents to PDF. It utilizes the powerful iText library under the hood So the steps for HTML to PDF conversion are as follows First step is to ensure that you have a well formed HTML that is done using jsoup which converts HTML to XHTML. Follow the step-by-step setup process and see the results Ok,it seems you can't do it directly with only OpenPDF, you have to use Flying Saucer: get flying-saucer-pdf-openpdf and then use it. Flying Saucer generates a rendered representation of the XHTML and CSS. OpenPDF is used to generate PDF document from that rendered representation The latter is about how to use Flying Saucer and OpenPDF libraries to convert Html content to PDF. The sample in there was simply using resources by providing system path to necessary files. An example: `String inputFile = " "; String outputFile = " "; String url = new File(inputFile).toURI().toURL().toString(); ITextRenderer renderer = new ITextRenderer(); ument(url);` Introduction to Flying Saucer. This means that just by starting with XHTML and CSS, you can create PDF Flying Saucer is a pure-Java library for rendering arbitrary well-formed XML (or XHTML) using CSS for layout and formatting, output to Swing panels, PDF, and images As of today (), there are three implementations of Flying Saucer available, one of which is OpenPDF. The sample in there was simply using resources by providing system path to necessary files You can use Flying Saucer to generate PDF files directly from XML /CSS input. Quoting from their readme (emphasis mine): The available artifacts are Flying Saucer is an open-source Java library that provides an easy way to convert XHTML/XML documents to PDF. It utilizes the powerful iText library under the hood for Open HTML to PDF is a pure-Java library for rendering a reasonable subset of well-formed XML/XHTML (and even some HTML5) using CSS (and later standards) for layout Learn how to convert HTML to PDF in Java using Flying Saucer, a free and open-source library. Creating PDF Files.
