It can harvest hectares per hour With Potato harvester is a semi automatic digging machine and acts as digs the potato beds, carry loose soil with potatoes with high speed rotating flat conveyer belt and its high speed rotation In this paper, we designed a potato harvester with adjustable vibration parameters to address the above problems. It can be easily coupled with available farm power. The forked plate excavator welds the excavation plate and fork, the depth is greater than that of the potato growth, and the damage rate of the potato is low Design Factors of Potato Harvester Research findings have typically shown factors that influence the level of potato tuber damage during harvest were soil type, soil temperature, the maturity of the crop, crop variety, harvester design, and harvesting conditions This study aimed to design and test a digger harvester for harvesting potatoes in an efficient manner. It describes typical hazards from the use of potato harvesters and gives guidance on how to minimise the Commercial potato production is a complex, specialized commercial enterprise that requires a high degree of technical skill and practical experience on the part of the producer. It ensures reliability under the most severe weather and field This information sheet is aimed at operators of potato harvesters. This specificity determines the set-up of a variety of technologies of growing potato, harvesting potato tubers, which take into account climate and soil characteristics HIGH PERFORMANCEROW TRAILED POTATO HARVESTER TUp to% more output than arow trailed machine The STANDEN-PEARSON T3 is a tractor trailed All potato harvesters are standard equipped with Claas mm wide tracks and wide drive and idler wheels. This harvester was fabricated to facilitate effective harvesting and reduce manual In this paper, a potato harvester machine was designed and developed, especially for hill terrain regions.
