This chapter focuses on the first step in any data science project: exploring the data. Statisticians often use the term estimates for values calculated from the data at hand, to draw a distinction between what we see from the data, and the theoretical true or exact state of affairs. Data scientists and business analysts are more likely to refer to such values as a metric. Two versions of the course (undergraduate, graduate) Courses are identical (same lectures, assignments, etc) except that problem sets have an additional question per assignment, usually requiring that students implement some advanced technique.
