There are many different types of quadrilaterals, which are classified by their sides and angles. In this worksheet, you Name all of the properties of a parallelogram and its diagonals Opposite Sides are parallel Opposite Sides are congruent Opposite Angles are congruent Consecutive Angles are supplementary Diagonals bisect each other Diagonals are congruent The properties of a rectangle and its diagonals All angles are right 2 All kites possess the following properties: Two pairs of adjacent sides of a kite are equal One diagonal of a kite bisects the other diagonal One diagonal of a kite bisects the opposite angles The diagonals of a kite are perpendicular A kite has at least one axis of symmetry This kite is usually called a rhombus Some quadrilaterals are squares Example lists three true statements based on the Venn diagram above. HY!KS 1#2#3#4 5#6#7#8 Quadrilateral THOM is a rectangle. Name all of the properties of a parallelogram and its diagonals Opposite Sides are parallel Opposite Sides are Polygons with four sides are called QUADRILATERALS. Created Date/11/PM Sec Geometry – Quadrilateral Properties. Redraw the Venn diagram so that it includes cyclic to all the properties of a parallelogram, the diagonals are perpendicular and bisect the opposite angles. If a rectangle is also a rhombus, then it is Quadrilaterals are classified by their properties (e.g. In addition to all the properties of a parallelogram, the diagonals are congruent. number of parallel sides). Open PDF The names of quadrilaterals studied in Answer Key) Square and Rectangle 2) Parallelogram, Square, Rhombus, and Rectangle 3) Trapezoid 4) Square 5) Parallelogram, Trapezoid, and Kite 6) Square and Rhombus Quadrilaterals are figures with four sides and four angles. Name. In these worksheets, students describe the properties of different types of quadrilaterals. There are various properties associated with specific kinds of quadrilaterals. It is a parallelogram with four right angles. Write six more true statements based on the Venn diagram A cyclic quadrilateral is a quadrilateral that can be circumscribed by a circle so that the circle touches each vertex.
