For example: `import { PDFDocument } from 'pdf-lib' import fontkit from '@pdf-lib/fontkit' const pdfDoc = await ()`
`erFontkit(fontkit) Parameters$('#cmd2').click(function() { var options = { '/'width': }; var pdf = new jsPDF('p', 'pt', 'a4');`
`L($('#content2'),,, options, function() { ('admit_ '); }); });` Here are the steps we'll follow to convert HTML to PDF in JS: Install
Grab and convert a selection of HTML using the code we provide. PDF in this case will be opened in a new tab. And here's
the schema code we'll implement: Plain text. A general-purpose, standards-based platform for parsing and rendering PDFs.
You do not need to call this method to embed standard fonts. `const res = await fetch(url) const uint8arr = new`
`Uint8Array(await new ,` · For example, if you want to create a simple PDF file with “Hello world!” text, just use the code
below. { A general-purpose, standards-based platform for parsing and rendering PDFs. This will represent your PDF
document with a default size of A4 paper and portrait orientation See here for instructions on how to install and register a
fontkit instance. `var doc = new jsPDF(); (10,, 'Hello world!'); (' ');` The first line, create a jsPDF object. Download Demo
GitHub Project ©Mozilla and individual contributors Download Demo GitHub Project ©Mozilla and individual
contributors. Optional: Include additional methods, arguments, and parameters to control how the final PDF file displays
and how the HTML content is split. is licensed Since will not work properly because of browser's policy, you can do it next
wayIf you have file URL, you can first fetch it, then convert to uint8array, then create blob and open blob in browser.
