GL JK 8) Find mNUT if mVUN = ° and mVUT = °. T N V U Each figure shows a triangle with one of its angle bisectors)  $m_2 = 8x$  and  $m_{EGF} = -4 + x$ . Equation practice with segment addition. We can make an equation out of the given information. This worksheet contains segment addition problems are only numbers and students will need to find the missing length contain expressions and students will need to set up an equation to solve for x. If we split a line segment into two segments, the length of the total segment equals the sums of the lengths of the two smaller segments.
