Remember to wash your hands thoroughly after collecting the PATIENT INSTRUCTIONS – SPUTUM COLLECTION. Remember to wash your hands thoroughly after collecting the specimen. Do not submit your cumulative collections. Close the container lid securely. Take sputum specimen to the laboratory within two (2) hours of collection. After a big cough, collect the sputum into the provided empty container. Replace the cap and tighten firmly. Do not include thin clear saliva. If a patient is unable to expectorate a sputum to repeat the collection. Keep the sputum sample refrigerated until it is taken to the laboratory. Write the following information on each of your collection containers: your full name – date of collection – time of collection. To get sputum from your lungs, breathe in and cough. Sputum Collection Guide. Spit sputum into tube. Provide at least 5mL and tightly close container. Label and refrigerate. Drink water before bed. In morning, rinse mouth with. After a big cough, collect the sputum into the provided empty container. Replace the cap and tighten firmly. The study nurse should hold the container up to the light to make sure you have provided a quality sample. Repeat – On day 1, you need to produce two high • Collect a series of three sputum specimens, hours apart, at least one of which is an early morning specimen. Optimally, sputum should be collected before the initiation of drug therapy. For release from home isolation: If patient is smear positive and on treatment: Collect sputum until specimens are negative. Sputum Sample You will be given the collection container(s) for your lab test before you are sent home. Document the time and date the sputum specimen was collected and the characteristics of the sputum, including amount and color. Take the specimen to the laboratory as soon as possible. Rinse or gargle with water. F To get the BEST QUALITY SPUTUM SAMPLE: Take the sample early in the morning. You have been asked by your physician to collect a sputum sample. A small volume of thick opaque sticky sputum is adequate. Collecting Your Sputum Sample Collect only one sample per day. Expectorate (spit) the thick sputum into the sputum container/cup you were given. The quality of the specimen is very important, so Once the sputum (phlegm) is in your mouth, release it into the container provided by the study nurse. Check – Give the sputum (phlegm) container to the study nurse to check for quality.
