Later, molecular and phylogenetic analysis revealed that staphylococci are not closely related to Micrococci In mouse osteoblasts, *S. aureus* demonstrated reased susceptibility to antibiotics with good intracellular penetration (clindamycin, erythromycin, and rifampin) This volume offers a comprehensive overview of basic and applied aspects of *Staphylococcus aureus*, which is one of the most important human pathogens. The organism was originally a leading nosocomial pathogen and afterwards epi-demiologically distinct clones emerged in community settings *S. aureus* produces a large array of virulence and immune evasion factors that hinder the human immune response⁷, Neutrophils represent the major defence against staphylococcal infections *Staphylococcus aureus* (*S. aureus* is also the etiological agent of suppurative abscesses, as first described by Sir Alexander Ogston in Ever since, studies on *S. aureus* have focused on the complex battery of Abstract. *aureus*) is a Gram-positive coccus with golden-colored colonies μm in diameter. Due to their roles in enhancing Introduction. It is an opportunistic pathogen and colonizes as healthy flora *Staphylococcus aureus* is a facultative anaerobic Gram-positive coccus and a member of the normal skin flora as well as the nasal passages of humans. Introduction. *Staphylococcus aureus* is a Gram-positive bacterium and causative agent of wide range of infectious diseases such as skin infections, bacteremia, endocarditis, pneumonia and food poisoning. *Staphylococcus* was initially believed to belong to the family Micrococcaceae. *Staphylococcus aureus* is a Gram-positive bacterium and causative agent of wide range of infectious diseases such as skin infections, bacteremia, endocarditis, *S. aureus* produces a large array of virulence and immune evasion factors that hinder the human immune response⁷, Neutrophils represent the major defence against models. It · Biofilms are clusters of microorganisms that form at various interfaces, including those between air and liquid or liquid and solid.
