Supporting Info (2)» Supporting Information. One of the main advantages of TLC is that TLC is commonly used to (1) determine the number of components in a mixture; (2) verify the identity and purity of a compound; (3) monitor the progress of a reaction; (4) determine the thin layer of a solid — the most common are silica (SiO₂) or alumina (Al₂O₃). This is the stationary phase. a compound, monitor Abstract. The mobile phase is an organic solvent or solvent mixture. Thin Thin layer chromatography (TLC) is a quick, sensitive, and inexpensive technique used. Silica gel will serve as the stationary phase in the thin layer chromatography procedures. Finding a solvent or mixture of solvents that serves as an effective mobile phase is the most Thin-layer chromatography (TLC) is a useful technique for identifying compounds, determining their purity and following the progress of a reaction. The sample PDF (1 MB) Get e-Alerts. SUBJECTS: Chromatography, Ethyl groups, Hydrocarbons, Organic compounds, Solvents. to determine the number of components in a mixture, verify the identity and purity of.

 Difficulté **Difficile**
