

# Translations:3D printed furniture connectors/1/en

---

Furniture connectors are 3D printed items that allow the assemblage of wooden rods, to create pieces of furniture, most notably tables and shelves. By choosing rods of different lengths ones can altogether create tables or shelves of various sizes. Use 27x27cm wooden rods with the current 3D item. You can also use other types of rods but you will need to modify the 3D design to suit your needs.
