

Translations:Build an Easy ISS Notifier/2/en

Tokymaker is a microcomputer from TokyLabs that lets you create inventions in 5 minutes by mixing electronics, programming, and IoT – with no prior engineering knowledge. Electronic modules connect without soldering, and everything is open source. It's programmed from a website, which sends code over Wi-Fi – no cables, software, or plugins. Using the graphical language Google Blockly, even non-programmers can easily create code.
