Machines & tools

- laser cutter, usually available in FabLabs

 Regarding the wood panels to be laser cut, the more plane - hence not warped - they are the better for precision cut. When buying those panels of plywood, don't hesitate to tell the vendor they will be used for laser cutting.

- 3D printer, also available in FabLabs
- soldering iron and materials

 Besides the obvious burning danger for oneself and/or surroundings when handling the soldering iron, some electronic components might be very sensitive to heat and need to be kept away from too much heat exposure. One must use caution and proceed gradually - no more than 2-3 seconds at a time.

- screwdriver, wire cutters, saw, etc.
- Dremel-like tool
