When a cause cannot be identified, it is called idiopathic transverse myelitis. Diagnostic criteria for involvement: acute complete transverse myelitis (ACTM) and acute partial transverse myelitis (APTM).^{7,8} ACTM is an acute or subacute inflammatory process of the spinal cord causing symmetric moderate or severe loss of function distal to that level. APTM is incomplete or patchy involvement of at least one spinal segment with mild to moderate The exact cause for transverse myelitis is not known, although the inflammation is thought to be the result of the immune system mistakenly attacking the spinal cord. Inflammation tends to Transverse myelitis is generally classified into disease-associated (ie, related to a specific infectious or immune-mediated etiology) and idiopathic forms. When identified at the first attack, NMO-IgG also predicts future episodes of myelitis or optic neuritis. myelitis. Transverse myelitis often develops at the same time as, or Transverse Myelitis Anu Jacob, M.D.,¹ and Brian G. Weinshenker, M.D., F.R.C.P.(C.)² ABSTRACT The differential diagnosis of acute inflammatory transverse myelitis (ATM) is broad. Therefore, physicians must be aware of the many potential etiologies for acute myelopathy, and should pursue an ordered, efficient, and cost-effective approach to the The findings on MRI are a key component of the diagnostic evaluation of transverse myelitis. Panel A shows an PDF Transverse Myelitis (TM) is a clinical syndrome in which an immune-mediated process causes neural injury to the spinal cord, resulting in varying Find, read and cite all the research The term myelitis refers to inflammation of the spinal cord; Transverse myelitis (TM) comprises a heterogeneous group of inflammatory disorders affecting the spinal cord, which can present with a wide range of motor, sensory, and The mechanism of transverse myelitis is often unknown, but some cases follow viral infection or vaccination, suggesting an autoimmune reaction. In a prospective study, the risk of developing recurrent Transverse myelitis (TM) is a neurological disorder caused by inflammation across one segment of the spinal cord. This is called an autoimmune reaction. Acute myelitis events are associated with a focal lesion within the spinal cord.
