If the isometric drawing can show all details and all dimensions on one drawing, it is ideal. An engineering drawing is a means of clearly and concisely communicating all of the information necessary to transform an idea or a concept in to reality. Any engineering drawing should show everything: a complete understanding of the object should be possible from the drawing. Therefore, an engineering drawing often contains more than just a graphic representation of its subject Role of Engineering Drawing: The engineering drawing subject is designed to impart the following skillsAbility to read and prepare engineering drawingsAbility to make freehand sketching of objectsPower to imagine, analyze and communicateCapacity to understand other subjects Any engineering drawing should show everything: a complete understanding of the object should be possible from the drawing. "Drawing" usually means using drawing An undimensioned drawing is prepared to delineate items that can be fabri-cated by use of the patterns to produce the item or to produce a tool for use in fabricating the item. A drawing is a graphic representation of an object, or a part of it, and is the result of creative thought by an engineer or technician. One can pack a great deal of information into an isometric drawing. We will treat "sketching" and "drawing" as one. One can pack a great deal of information into an isometric drawing require an understanding of its creator, only an understanding of engineering drawings. "Sketching" generally means freehand drawing. When one person sketches a rough map in the basics of engineering sketching and drawing.
