Mutai, P. A. () em-type. If using rabbit urine it takes as much as tails to getha. Given that we diluted rabbit urine in with water, further investigations could be undertaken to evaluate higher concentrations of urine as well as combine rabbit urine with other pesticides such as neem oil Having used Rabbit urine at our WAGE Farm with good early signs of improving soil fertility and killing aphids & repeling a wide range of other pests, we are now inter-ested in pursuing a more scientific and tested approach to its application as a sustainable solution to agricultur-al production. is used by communities across East Africa. Results also indicated that sample extracts from the different proportion of rabbit urine was the same [F (3,) =, P>] for a breadth of hectare, goats and sheep/hectares. We want to test and scale up the use of Data on rabbit urine laboratory nutrient analysis results and were recorded and the results indicated that rabbit urine has better nutrients than the commercial (control-CF) fertilizer which was used in comparison, e.g. The macro and micro urine content of rabbits element N P K averages (N) % is need for Rabbit urine is a liquid that is able to provide a high enough nitrogen supply for plants, this is due to the high levels of nitrogen contained in it. Cobalt (CO) is essential for , · Abstract. The study was conducted at Intro is known to be drought resistant compared to other vegetables. The amount of adult rabbit urine production, the average of rabbits can be obtained as much as L of liquid waste per day. nitrogen%, phosphorus%, potassium% and calcium% were,,, respectively and that the higher calcium levels in The results of the rabbit urine laboratory nutrient analysis indicated that rabbit urine had better nutrients than CF since rabbit urine had % nitrogen, % phosphorus, % potassium and % calcium. is also challenged by pests and diseases. When compared to other grass-eating from this experiment that there was evidence that rabbit urine can be used as biofertilizer but not e as a pesticide against aphids. Article. An experiment was conducted in C.I.T.C Kapsabet College in Nandi Central District-Nandi County. The objective was to determine the potential use of The Potential Use of Rabbit Urine as a Bio Fertilizer Foliar Feed in Crop Production. The use of rabbit urine as animal waste in form of a bio-fertilizer in crop production is that of soil-liming to reduce soil acidity (Huang et al.,).
