The Acrobat JPG Hey guys wondering if you can assist, I know it is possible to do pdf to jpg if a pc has Adobe pro installed via vba but what if that isn't a I have pdf file which i need to convert to ImageFormat [PNG or GIF] using Word VBA Macro. To convert PDF's to JPEG or TIFF I prefer Irfan View as it has nice command-line options (enables me to show PDF's on reports, by converting them to JPEG's in background) While there is software to change format from pdf to jpg, how to convert the format by VBA as this is part of my Main VBA. (I have only free version of Foxit Reader.) Convert JPG to PDF online. please provide the solution either through VBA or VB framework. thanks VBA to Convert PDF to Image Partof
