Introduction

Switching from traditional cigarettes to vaping is indeed a healthy move. However for the best experience you need to be a little cautious when choosing the perfect [vaping](#) device and liquid. As a beginner you may need a little help in starting your vaping journey so here is a guide on 5 things you need to know before buying your first vaping device.

At Ecchoice, you will find an extensive range of **electronic cigarettes** and e-liquids designed to deliver the ultimate vaping experience. Their quality products, seamless customer service and competitive pricing, are what makes them Australia's best vape brand to **buy electronic cigarettes in Adelaide**.

5 Things to Consider Before You Start Vaping

The vaping experience that you will have depends largely on the devices and vape juice that you choose. Along with the right equipment, here is a list of the top 5 most important since every smoker should know before buying e-cigs and **e-juice in Adelaide**.

1. Selecting the Right E-liquid

The experience you have with your vaping device is majorly influenced by the type of liquid that you choose. You can go for a regular e-liquid or ditch a liquid and go for a wax. The type of filling you use will influence the texture, flavour and strength of the smoke generated by the coil.

It is always recommended that beginners go for low strength that does not deliver harsh hits. Once you get the hang of it, you can slowly level up.

2. Choosing the Correct Tank Type

When choosing the perfect device for your vaping journey, there are many choices. Disposable or reusable vaping devices are not the only choice you can make.

Vaping devices are available with two different sizes of vape tanks. The smaller tanks are found in vape pens which are known for their slim and discrete style. These e-cigarettes only start vaporising the liquid when you press and hold the button. They are perfect for occasional

smokers who want to keep their vaping interests under wraps.

On the other hand, larger vape tanks are found in bigger vaping devices like a box mod. Since these tanks have a much higher capacity, they produce thicker clouds of smoke. Some of the devices also come with adjustable settings and long battery life for continuous service.

3. Portability & Discretion

Most vaping devices are portable. However you might be looking for something more discreet, especially when you're using it in public. In this case vape pens are the best choice for a few puffs on the go. If you are looking for something stronger that you can use at home, go for a vape kit.

Some smokers simply cannot get over the aesthetics and slim build of a regular cigarette. If you are one of them, then go for cig-a-likes. These devices look exactly like a traditional cigarette and come with a slim, tiny battery to keep them running for hours.

4. Budget

Before you **buy electronic cigarettes in Adelaide**, you should chalk out your budget. After all, a tight budget will narrow down your options. The cost of disposable vaping devices can range from anywhere between \$10 to \$40, depending on the brand. And the cost of reusable vaping devices can range from \$25 to \$100.

However based on your usage, disposable waves can last a few days or a week at max, while a reusable e-cig can be used for at least 6 to 7 months which makes it a much more cost-effective investment in the long term.

5. Warranty & Support

It's always nice to know that the brand has your back in case anything goes wrong with your product. Along with choosing the right product type, you also need to choose a reliable brand for the ultimate experience.

Make sure you look for a brand with substantial industry experience, a dedicated customer support wing and warranty coverage to tackle unexpected product-related issues.

Final Thoughts

The switch from traditional cigarettes to vaping may seem daunting but choosing the right device and e-liquids will ease your journey and make it more enjoyable. The one thing that remains constant at every stage of your vaping journey is quality. Whether it's the device, the e-liquid or the customer service provided by the brand, quality should be your priority. When you think vaping think Ecchoice.
