itecture for a 'buy side' algorithmic trading system. With respect A conceptual view describes high level concepts and mechanisms that exist in the system at the highest level of granularity. At this level, the algorithmic trading system follows an event driven architecture (EDA) broken up across four layers, and two architectural aspects. oduction and Document Description Purpose of this documentThe purpose of this document is to describe, at a high level of abstraction, the architectural requirements which will inform the specification of a systems ar.
