Introduction

E-cigarettes have gained substantial traction among smokers over the years. Being nicotine-free it also offers multiple fruity flavours of varying strengths. However people often have trouble choosing between disposable e-cigarettes and reusable e-cigarettes. The device you choose to vape, heavily impacts your experience. That's why it's essential to understand which of the two caters best to your needs. Before we talk about disposable and reusable e-cigs, make sure you check out Ecchoice's **vape e-liquid** and e-cigarette to **buy tobacco accessories Australia**. After all, with choosing the right device, you also need an experienced industry leader like Ecchoice to **buy tobacco accessories Australia**.

Disposable E-cigarette

Disposable e-cigarettes are **vaping** devices that come with a pre-filled liquid. With a disposable E-cigarette, you won't have to go through the unnecessary hassle of refilling and coil clean-up. Once you use up the liquid, simply dispose it and get a new one. These devices are usually smaller and easier to use. They also come at a lower upfront cost and are perfect for occasional smokers.

Benefits of Using Disposable E-cigarettes

Here are the top 3 benefits of using disposable e-cigarettes

1. No Maintenance Required

The best part of using a disposable e-cigarette is that it requires zero maintenance. The liquid is already filled, and the **e-cigarettes accessories** are pre-fitted. You also don't have to worry about charging the battery or cleaning the vape coil. All that you have to do is click the button to light it up and take a puff.

2. Cheaper Upfront Cost

Unlike reusable e-cigs, disposable e-cigs are much cheaper initially. The exact cost will vary from brand to brand.

3. Long Lasting

Disposable vapes are much longer-lasting than traditional cigarettes. Regular cigarettes offer 8 to 10 puffs which can slightly vary depending on the brand. On the other hand, disposable vape offers approximately 400 puffs which are almost equal to two packets of traditional cigarettes. Depending on how frequently you smoke, a disposable e-cig can last you an entire week or more.

Disadvantage of Using Disposable E-cigarettes

Despite all the benefits of disposable e-cigarettes, there is one significant disadvantage that you cannot ignore.

Disposable e-cigarettes have minimal flavour, strength and device design options, unlike reusable e-cigarettes. Another problem with disposable cigarettes is that their rigid structure does not allow alterations or adjustments at any level.

Hence if you want to increase or decrease the strength of the liquid, moderate the airflow, or adjust the intensity of its flavour, there is nothing you can do about it.

Reusable E-cigarettes

Also known as rechargeable e-cigarette, these devices come with a battery, a tank, a vape coil and an e-liquid. The battery keeps the device running; the tank holds the liquid, the vape coil vaporises the liquid, and the liquid generates the smoke.

These are perfect for regular smokers who prefer higher flexibility in choosing their **vaping** liquid's flavours and strength.

Advantages of Using Reusable E-cigarettes

Here are the top 3 advantages of using reusable e-cigarettes

1. Higher Quality

Unlike disposable e-cigarettes, reusable e-cigarettes are made to last longer. That's why they are known to be of better quality and made of solid and sturdy materials. The batteries are designed to endure multiple charging sessions, and the vape coils are tailored to vaporise liquid time and again with consistent efficiency.

2. Cost-effective in the Long Run

The initial cost of buying a reusable e-cigarette is very high. However, owing to its long-term service, you could be saving more than you would with a disposable vape device. Depending on the brand, the initial cost can range from anywhere between \$25 to \$100, but at the same time, you can use one device for at least 6 to 7 months.

3. Better Experience

Reusable e-cigarettes are customisable. This means that you can change the airflow, get a new liquid or for a better vape coil anytime you want. This improves your **vaping** experience. Along with that, you get more options in terms of the **vape e-liquid** flavour and strength than a disposable e-cig.

Disadvantages of Using a Reusable E-cigarette

The biggest disadvantage to reusable e-cigarettes is the effort and time that goes into maintaining the **electronic cigarette accessories**. You must frequently clean the vape coil for efficient heating.

Also once the liquid is used up, you need to refill it yourself. For new smokers this can be a challenging task. However once you get the hang, it is worth the effort considering the countless other benefits it offers.

Final Thoughts

There is no clear winner of the disposable vs reusable e-cigarette debate. As a new smoker we recommend that you start with disposable e-cigs to test the waters. As you gain experience you can dive right into it with quality reusable e-cigarettes for the ultimate experience.
